ETHOS TECHNOLOGY

We are an engineering consulting firm that supports industrial companies in product development, process optimization, and environmental sustainability. We support our clients with advanced technical expertise and a strategic approach, contributing to improve performance and competitiveness.

We transform technical skills into value for your business

We develop innovative and sustainable technological solutions, applied to real-world contexts and designed to meet clients concrete needs, helping to generate long-term value. At the same time, we believe in people: we foster a dynamic and inclusive work environment where individuals can grow and actively contribute to technological development.

ENVIRONMENTAL ENGINEERING

ENVIRONMENTAL PERMITTING

Support in environmental permitting processes, management of authorizations, and regulatory compliance.

LCA ANALYSIS

Assessment of the environmental impact of products and processes to support sustainable decisions and ESG strategies.

REMEDIATION OF CONTAMINATED SITES

Design of environmental remediation interventions for the safe management and recovery of contaminated sites in compliance with current regulations.

PRODUCT AND PROCESS ENGINEERING

Mechanical, Electrical, Electronic, and Software Design

Development of integrated HW & SW systems for complex technological solutions, from design to implementation.

Reliability and Safety Analysis

Reliability and functional safety analysis services aimed at ensuring system compliance, quality, and safety.

Industrial Engineering

Optimization of production processes, support for industrialization, and definition of cycles, times, and methods.
